

MSE Portfolio Presentation 3

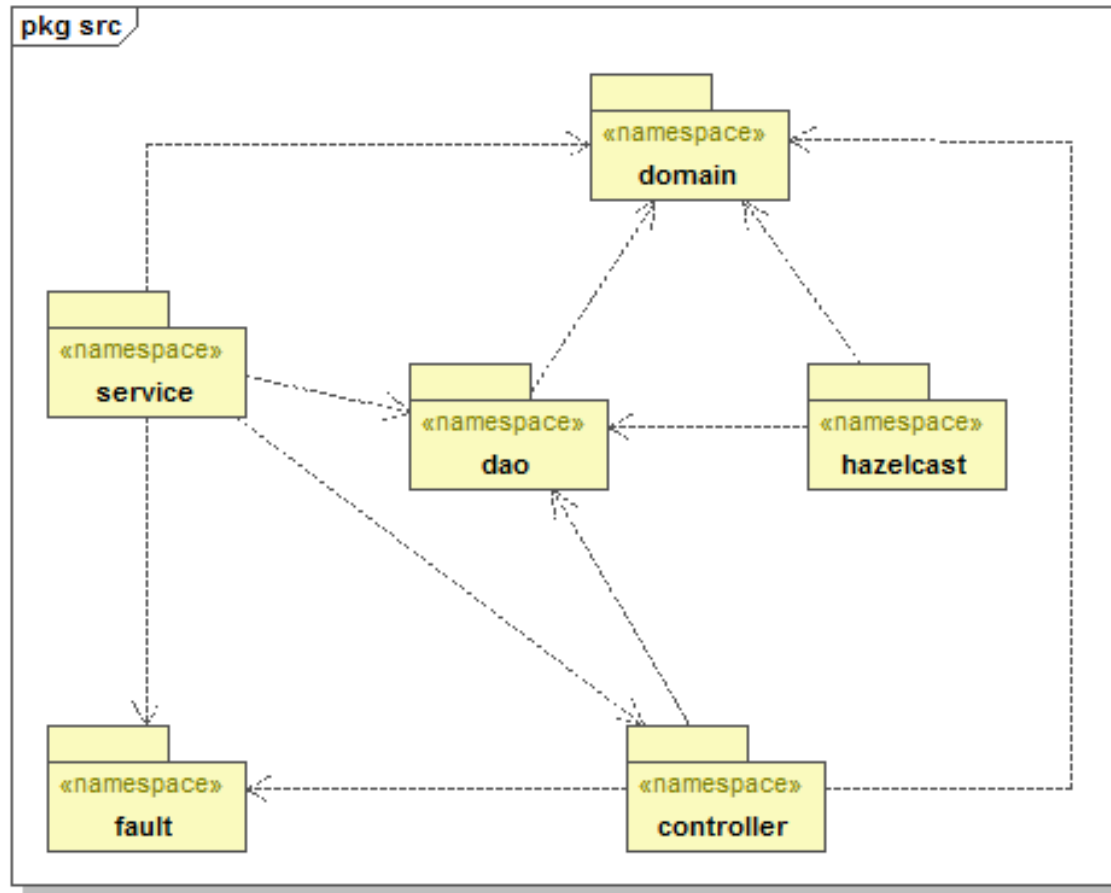

Doug Smith

December 3, 2010

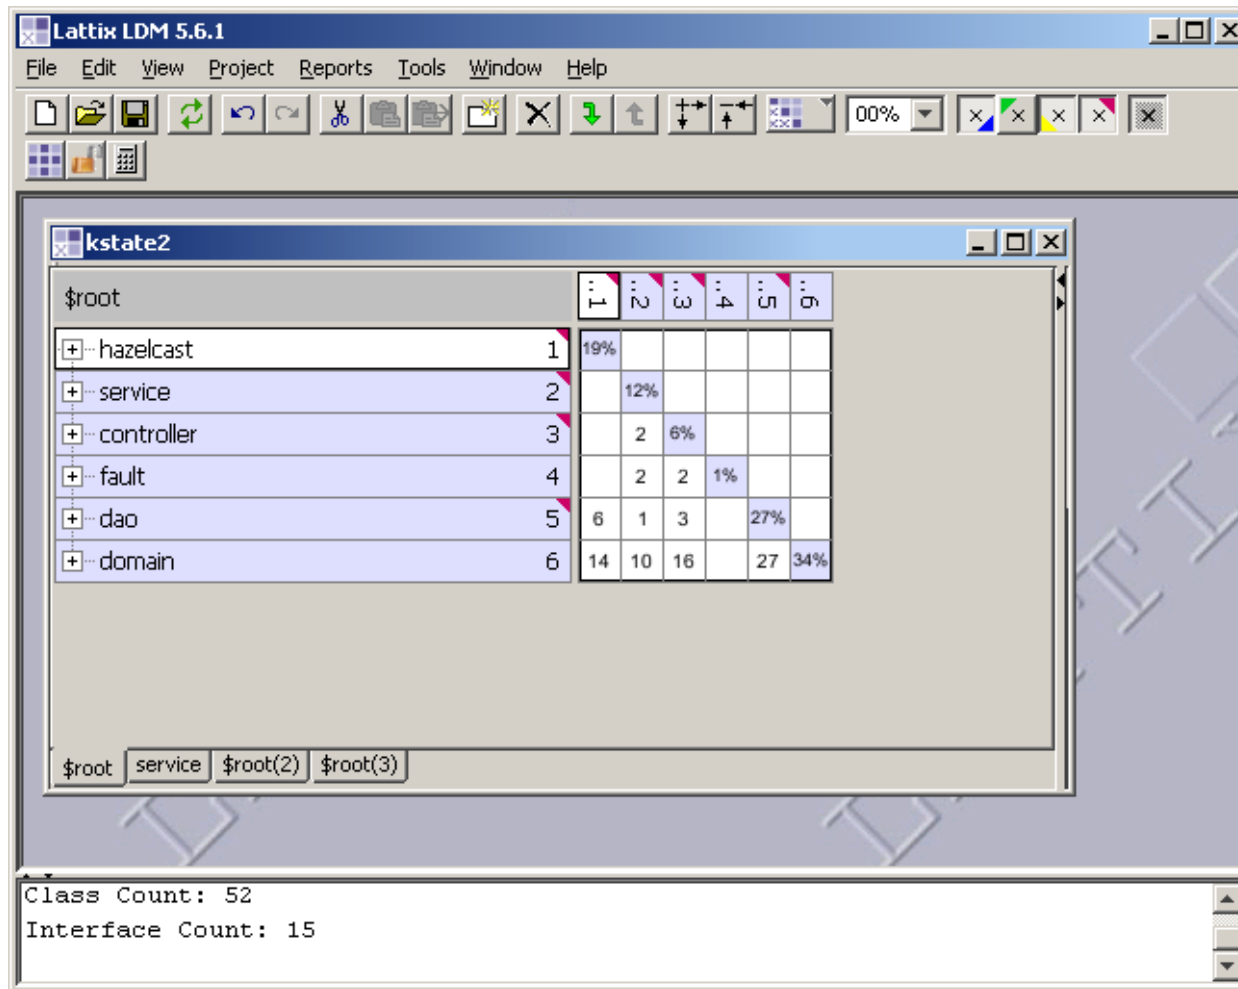

<http://people.cis.ksu.edu/~dougs/Site/Welcome.html>

- ▶ **Component Design – Highlights**
- ▶ **Assessment Evaluation**
 - **Unit testing and code quality metrics**
 - **Scale test results**
- ▶ **Project Evaluation**
 - **Effort, Time Breakdown, Actuals vs Estimates**
 - **Lessons Learned**
- ▶ **Demo**
- ▶ **Q and A**

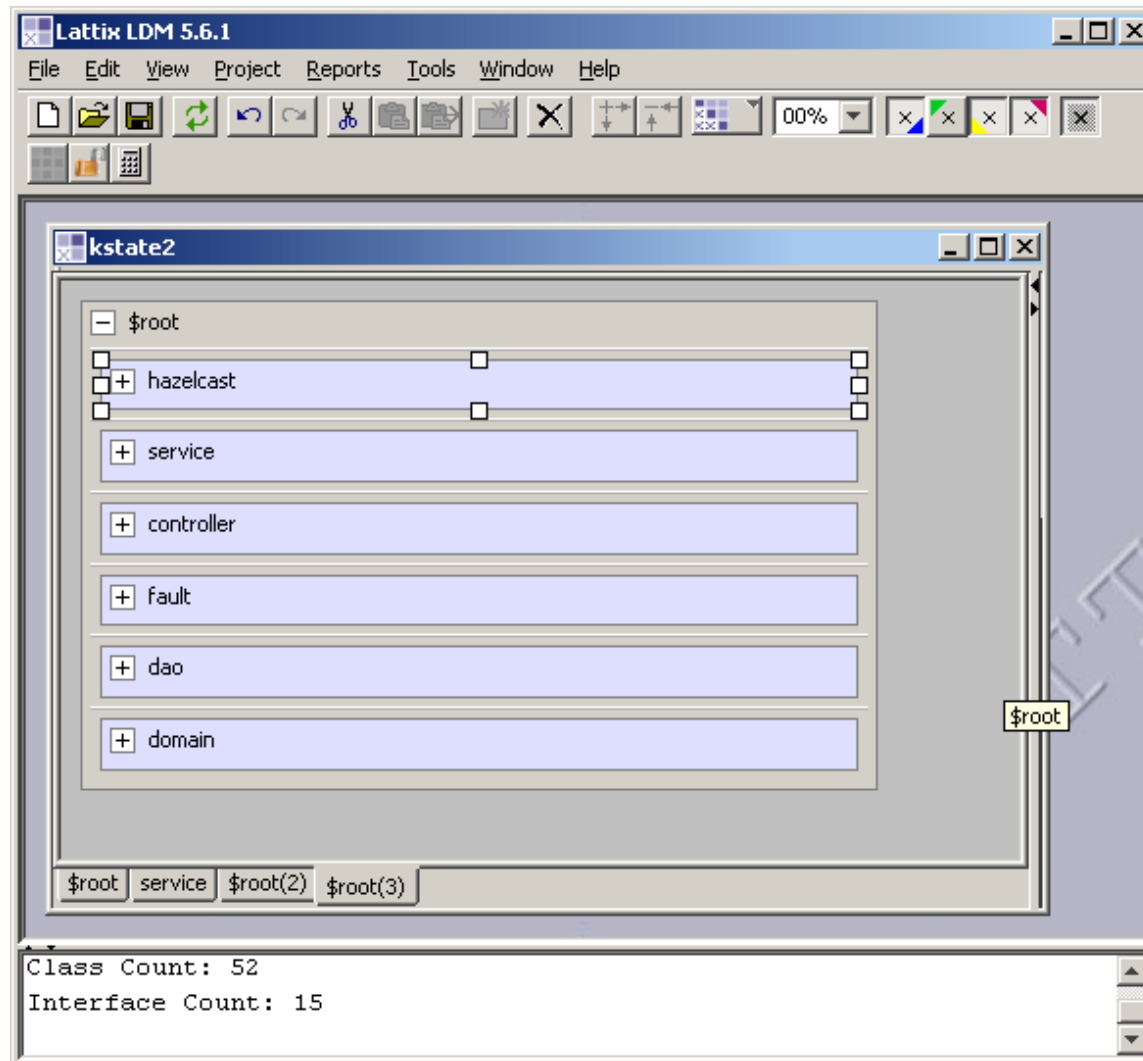

Package Structure – Design View

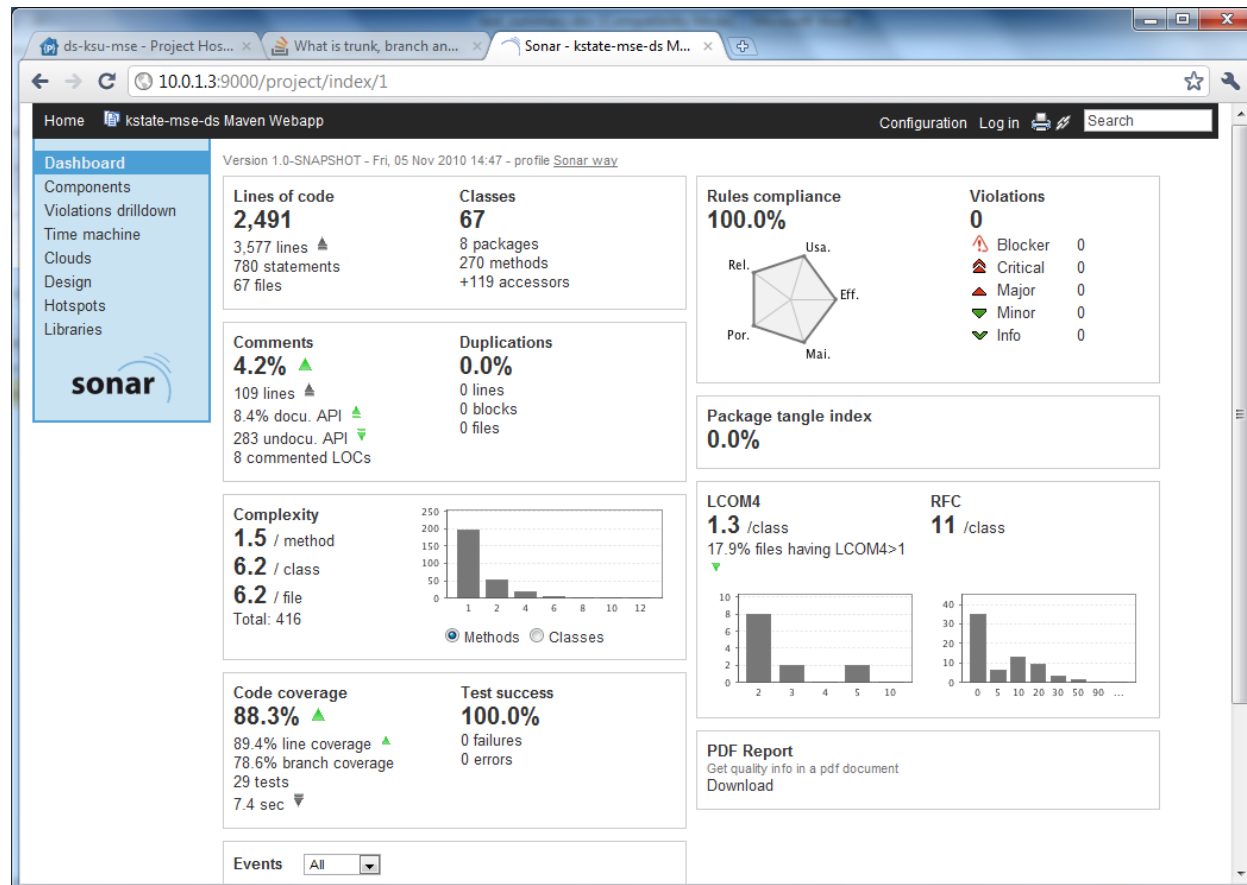

Component Highlights – Dependency State Matrix

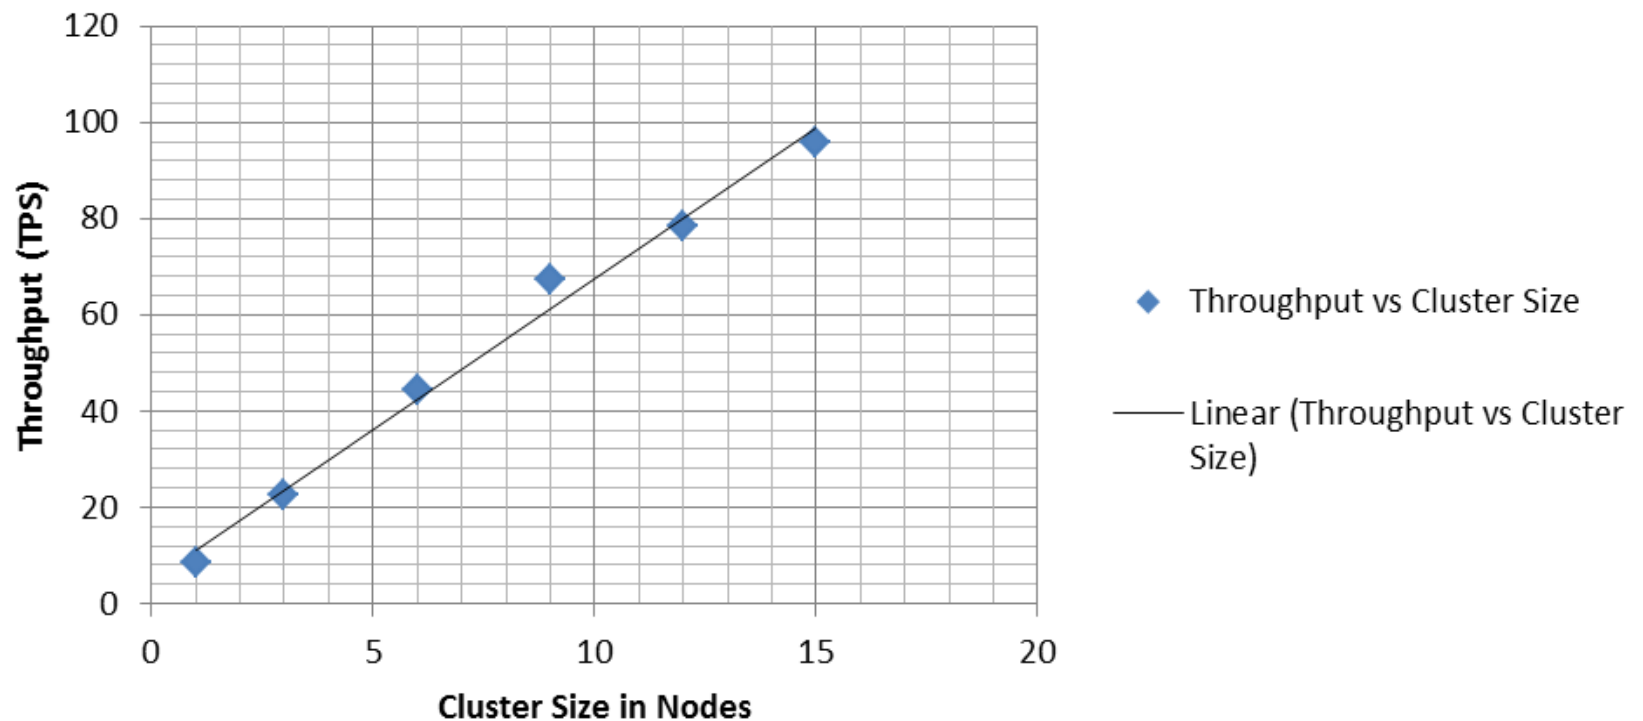

Component Design – Extracted Dependency Layers

► Review of unit test coverage and code quality metrics using Sonar (demo)

Assessment – Scale Test Results

Project Evaluation – Time Breakdown By Phase

Project Evaluation – Effort and Estimates

- ▶ **Effort Expended: 376 Hours**
- ▶ **Seat of Pants Estimate: 555 Hours**
 - Estimate obtained via looking a work breakdown structure and guessing durations
- ▶ **COCOMO II Post-Architecture Estimate: 395 Hours**
 - Estimate extremely sensitive to sizing metrics (in this case SLOC)

- ▶ **There's always room for improvement**
- ▶ **Real progress requires focused effort**
- ▶ **Be realistic about time commitments**
- ▶ **You can't be too diligent in record keeping**
- ▶ **Formal specification is a high value activity**
- ▶ **Trust data over intuition**
- ▶ **Infrastructure as a service is has high value for software development**
- ▶ **Invest in automation**
