		Attempted to integrate Hiberbate 3.3 with JBoss Cache 2.x.
		This was ultimately an exercise in futility as the Hibernate
		documentation does not accurately describe how the JBoss
09/27/2008	240 Prototyping	Cache 2.x configuration is performed.
		Attempted to configurare a JTA transaction outside of a J2EE application container that could be used in a Spring managed transaction that involved an Oracle resource manager accessed via the Spring ORM wrapper on top of Hibernate and a JBoss Cache resource manager. Bottom line is I could not get Hibernate to use a transaction manager lookup class - it assumed an JNDI lookup when doing a distributed transaction. Thus the project
10/03/2008	150 Prototyping	implementation will require an application server.
10/06/2008	120 Prototyping	More investigation of JBoss app server and associated IDE tooling. Based on investigation so far, while JBoss provides a lightweight application server that is easy to deploy, in the interest of actually completing this project, I will favor the IBM RAD/WebSphere combination as it will maximize developer productivity in the context of this project.
10/00/2000	120 1 Tototyping	Proof of concept prototype - web service integrated with
		Spring/Hibernate/Jboss cache: developed initial cut using
10/13/2008	120 Prototyping	Hibernate annotations.
10/14/2008	120 Prototyping	Completion of initial version.
40/45/0000	400 Destatueine	Testing revealed disconnect between hibernate/spring/Jboss in terms of the underlying platform transaction manager being used (non supported version
10/15/2008	120 Prototyping	being selected). Reimplemented prototype using xml mapping instead of
		annotations to allow Spring to provide the transaction manager; supported transaction manager is now being
10/16/2008	120 Prototyping	used.
10/17/2008	120 Prototyping	Finished up prototype, demonstrating replication.
40/40/0000	400	Reviewed software development life-cycle and project management considers in the Royce project management book. Went through MSE portfolio requirements to
10/19/2008	180 Investigation	understand life-cycle components.
10/20/2008	60 Planning	Put together work breakdown structure for MSE project. Put WBS into MS Project, including estimates. Started
10/21/2008	90 Planning	project cost estimation.

10/22/2008	120 Planning	Completed project cost estimation; wrote project plan document.
10/23/2008	180 Planning	Produced software quality assurance plan.
10/27/2008	60 Time Recording	Crawled through journal entries and summarized in this time sheet.
10/28/2008	60 Web site	Started work on web site: went through the iWeb tutorial, verified ssh connectivity to department account still functioned.
10/29/2008 10/30/2008	60 Web site 45 Web site	Loaded phase 1 artifacts into web site, published web site Added timelog to web site.
